Pacer Protect™ Disinfectant System

Protect your animals. Protect your business. Protect your investment.

Features & Benefits

- ◇ **Disinfectant Storage**
 - *Feature:* 40 Gallon poly tank mounted on board of trailer.
 - *Benefit:* Tank mounted on trailer allows operator access for filling tank fluids.
- ◇ **Individual Nozzle Lines**
 - *Feature:* Each nozzle has its own dedicated line size and type.
 - *Benefit:* Delivers consistent pressure and uniform spray across every tire.
- ◇ **TurfJet Nozzles with Stainless Steel Connections**
 - *Feature:* Stainless Steel nozzle provides 90-100 degree wide-angle flat fan spray pattern at 50 PSI. Providing balanced flow and ideal droplet size for disinfectant application.
 - *Benefit:* Large droplet and flat fan spray provides complete tire coverage with reduced disinfectant drift to maximize effectiveness. The stainless steel components are protected from corrosion for long lasting durability in harsh environments.
- ◇ **Banjo Strainer**
 - *Feature:* Removable and washable strainer that filters disinfectant before it enters the system.
 - *Benefit:* Prevents clogging, extends nozzle life, and ensures reliable performance of disinfectant flow through the system.
- ◇ **Manual Shut off Valve**
 - *Feature:* Manual ball valve located between tank and banjo strainer.
 - *Benefit:* Provides the ability to service disinfectant system downstream from tank with minimal fluid loss.
- ◇ **Cab-Activated Operation**
 - *Feature:* On/Off switch conveniently located in the cab.
 - *Benefit:* Operator can activate the system without leaving the cab.
- ◇ **Versatile Installation**
 - *Feature:* Available on new KT Pacer units or retrofitted to existing equipment.
 - *Benefit:* Flexible solution for operations of any size.
- ◇ **Electric Pump**
 - *Feature:* 7 Gallon/Minute @ 50 PSI weather resistant housing.
 - *Benefit:* Provides high volume flow @ 50 PSI to disperse disinfectant fluid consistently to all nozzle locations.

How It Works

The Pacer Protect™ disinfectant system sanitizes tires and undercarriage on feed trailers and delivery trucks.

Deployed directly from the cab, disinfectant is applied before and after each farm stop, reducing the spread of pathogens and strengthening biosecurity across your operation.

Disinfectant Nozzle
